ACADEMIC PROJECTS

Developed a Gemini Clone

- Designed and implemented a clone of Google's Gemini AI model using the MERN stack and Google Gemini API.
- It is capable of performing text-to-text conversations with the user. (Website) (Github)

Developed a Book Database

- Built a book database application using the MERN stack.
- Implemented features of detailed book information like inserting a new book title and its details along with deletion and editing.
- Utilized MongoDB to store and retrieve book data, Express.js for server-side logic, React.js for a user-friendly interface, and Node.js as the runtime environment. (Website) (Github)

ACADEMIC ACHIEVEMENTS

Cyber Hunt Runner-Up: Demonstrated an understanding of ethical hacking principles while working with a team displaying our problem-solving skills and securing the first runner-up position

Generative AI for Beginner's Certificate: Received after completing a detailed study on Generative AI and its functionality.
